Cabinet Care Guide

Your Diamond® cabinetry is distinguished by a beautiful multi-step exterior finish. “Nature’s fingerprint” is never the same in two pieces of wood, and the experts at Diamond have carefully finished your cabinetry to highlight and complement the naturally occurring variations in color and grain.

The Diamond finish is as durable as it is beautiful. A catalyzed topcoat creates an easy-care surface that protects your cabinetry from many common spills, moisture, and everyday wear.

The Diamond finish will remain beautiful with very little maintenance. Follow these tips on basic care and you will enjoy your Diamond cabinetry for years to come:

1. After installation is complete, wipe the cabinets with a soft, clean cloth dampened with water. Dry immediately with another clean, soft cloth.
2. Regular cleaning requires only wiping with a dampened cloth and then drying. Remove oil, grease, or general soil by using a clean cloth dampened with a fresh solution of mild soap and water. Rinse with a clean cloth dampened with clean water and then dry thoroughly.
3. Warning: Excess moisture is one of the worst enemies of any finish. Sink, range, dishwasher, oven and baseboard areas are most susceptible to this. Promptly remove water spills and excess moisture from cabinets, using a clean, soft cloth.
4. Avoid using harsh detergents, strong soaps, abrasive cleaners, or self-polishing waxes when cleaning; avoid using ammonia solutions on or near cabinets. These substances could have a deteriorating effect on the finished surface.
5. Avoid using a dishcloth to clean or dry cabinets, as it may contain remnants of detergent or grease.
6. Cover nicks and scratches with a tinted putty stick, such as the one included in the Diamond Touch-Up Kit.
7. We do not recommend waxing. Over time, waxing and polishing compounds may build up on the surface causing a hazy, streaky appearance.
